# SafetyRail™

## ADA-Compliant Pedestrian Barricade

### SafetyWall™ is:

- Sturdier than most barricades and longitudinal channelizer devices.
- Easier to transport, install and remove than concrete or plastic barrier.
- Compliant with ADA Guidelines and MUTCD, 2009 Edition, either as a single barricade or as a longitudinal channelizer device.

*SafetyWall assembles quickly and easily... no tools or hardware required!*

**Meets MUTCD 6F.71, Longitudinal Channelizing Devices, Standard for pedestrian traffic control:**

“LCDs SHALL be interlocked to...channelize flow...SHALL NOT have gaps that allow pedestrians to stray from the channelizing path.”

**SafetyWall is ADA-Compliant.**

### SafetyWall™ Features

- SafetyWall is sturdier than conventional barricades and easier to transport and install than conventional barriers.
- SafetyWall measures 74” long, 36” tall, 3” thick, and weighs only 35 lbs. It’s a lightweight device designed for easy transport and installation.
- 1 person can install an entire array of SafetyWall in minutes. Unlike concrete barrier, no equipment is required to move SafetyWall in place.
- With its simple yet robust interlocking connection, no tools are required for assembly.
- Folding metal legs provide support; sand bags add ballast. Simply press-fit the legs back into place, out of the way, when not in use.
- SafetyWall stacks neatly for easy transport and storage.
- Made from UV-stabilized high-density plastic, for long life and durability.
- SafetyWall ships UPS!
